

Cursor Prompt – Delete Reel & Edit/Delete Transactions (MERN ERP)

Context:

You are working on an already functional Reel Inventory ERP built using the MERN stack.

All core features are working correctly.

The goal is to add delete and edit capabilities with minimal changes and minimal agent usage.

PART 1 – Delete Reel Type:

A reel can be deleted only if it has no associated transactions.

If transactions exist, deletion must be blocked with a clear error message.

Add a delete button at dashboard row level with confirmation popup.

Backend:

DELETE /api/reels/:reelId

Before deleting, check for existing transactions.

Do not cascade delete.

PART 2 – Edit & Delete Transactions:

For each transaction row, add Edit and Delete buttons.

Editable fields:

- inwardKg / usageKg

- bitReelKg

- remarks

Date and reelId must remain unchanged.

Edit Rules:

Validate that usage + bitReel does not exceed available stock.

Recalculate stock after edit.

Delete Rules:

Allow deleting a transaction after confirmation.

Recalculate stock chronologically after deletion.

APIs:

PUT /api/transactions/:transactionId

DELETE /api/transactions/:transactionId

Stock Integrity:

Do not store redundant stock values.

Always derive closing stock from transaction history.

Restrictions:

No refactors.

No schema redesign.

No role changes.

No UI overhaul.

No new collections.

Final Goal:

Enable safe correction of mistakes without breaking ERP stock accuracy.
